NIH_BMAP_M_S3.1,
NIH_BMAP_M_S3.1 The subtracted library
(NIH_BMAP_M_S4) was constructed as follows: PCRamplified
cDNA inserts from NIH_BMAP_M_S3.2, and
NIH_BMAP_M_S3.1 clones from which 3' ESTs had been derived
was used as a driver in a hybridization with a pool of
the NIH_BMAP_M_S3.1 NIH_BMAP_M_S3.2, and NIH_BMAP_M_S3.1
libraries in the form of single-stranded circles. The
remaining single-stranded circles (subtracted library)
was purified by hydroxyapatite column chromatography,
converted to double-stranded circles and electroporated
into DH10B bacteria (LifeTechnologies) to generate the
NIH_BMAP_M_S4 library. This procedure has been previously

NIH_BMAP_M_S4 library is a subtracted library of a series
ultimately derived from a mixture of individually tagged
normalized libraries from ten regions of the mouse brain
/corehallum brain tens.
